AGENDA ITEM # 3

**TO:** Bicycle/Pedestrian Advisory Commission

**FROM:** Cedric Novenario, Staff Liaison

**SUBJECT:** Project Inventory Database

**RECOMMENDATION:**

Provide an update on Project Inventory Database

---

**BACKGROUND**

The project inventory database currently has 131 identified projects. The original database started with over 250 projects that were submitted by the BPAC from sources ranging from existing studies, plans, personal observation, and requests from the public. A sub-committee was formed to refine the project's key identifiers and to consolidate like information.

**DISCUSSION**

The Pedestrian Master Plan (PMP) identified 104 projects separated by high, medium, and low priorities. In addition, Appendix E of the PMP identified an additional 148 projects related to the Suggested Routes to School Maps.

The Walkable Communities Feedback identified 60 total areas for improvement in the categories: Community Profile, Status of Walking, Planning, Education & Encouragement, Engineering, and Enforcement.

Thus, the total amount of new projects to be added to the project inventory database is 312. It is likely that many projects will be duplicates or overlap. Staff will attempt to cross check the existing projects against the new additions and update the BPAC at the next quarterly update.
